Workflow

We are going to be working online through Discord and MSTEams, neither one of us is currently in Netherland.

We communicate often and can easily reach each other if something comes up.

Web App Description

We are going to be creating a website that will be hosting game reviews.

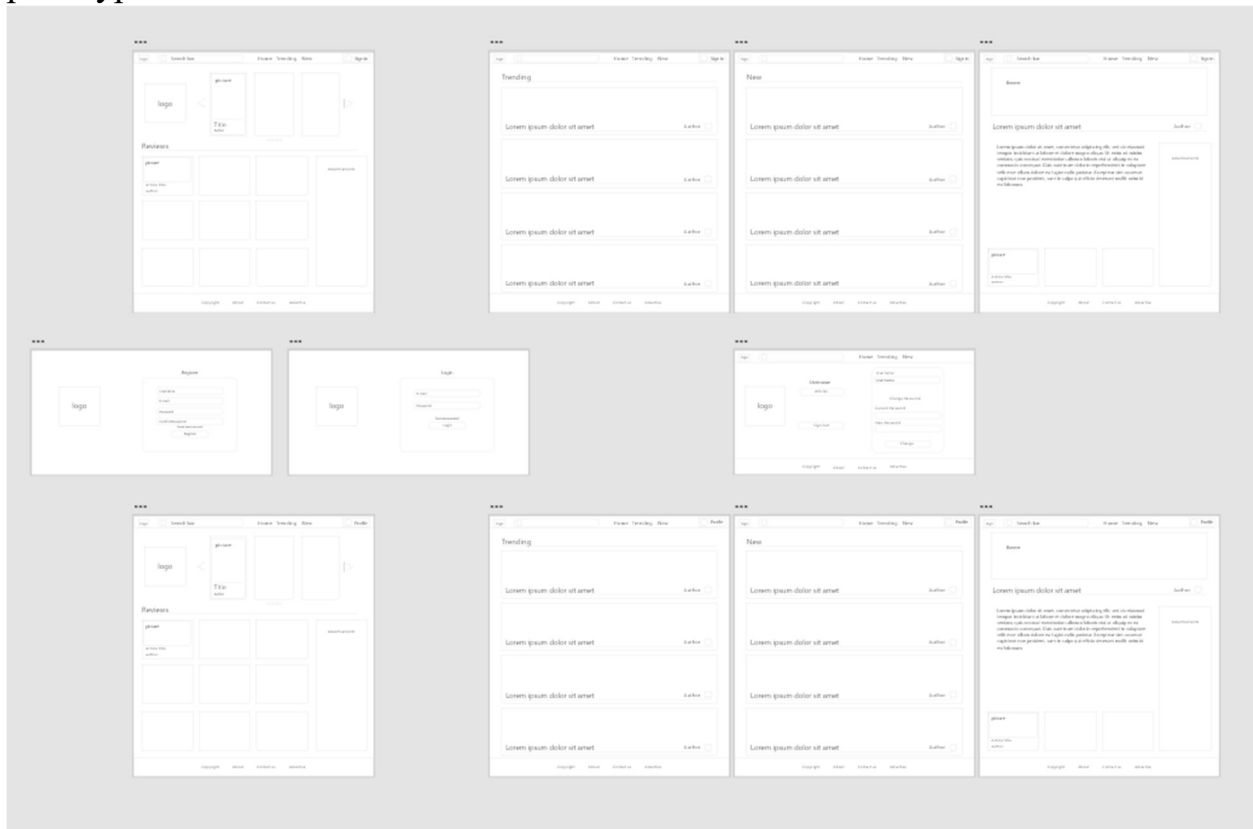

We also want users to be able to create and log into the website with their accounts and be able to write comments or articles.

List of possible pages

1. Login and register pages.
2. A home page where you can see the most read and most recent articles.
3. A trending and new page that will show lists of articles.
4. Pages for the actual articles.
5. A settings or profile page where users can change their settings and view the reviews they have written.
6. An about us page and contact us page.

Page layouts

The page layout prototype is in the gitlab repository, but here is the first prototype.

Viewports

The website will be viewable and useable from mobile phones and desktop browsers.
